

ABSTRACT OF THE DISCLOSURE

To provide a wireless transmitting method and a wireless transmitter capable of performing efficient wireless transmission depending on the length of asynchronous information. The wireless transmitting method for forming a wireless network using a plurality of communicating devices to carry out asynchronous transmission of information comprises the steps of building a monopayload packet 46 having one of predetermined information units (units) of the information as a data payload, building a multipayload packet 40 having a plurality of predetermined information units (units) of the information as a data payload, and carrying out the asynchronous transmission by wireless packet obtained by optionally combining the monopayload packet 46 with the multipayload packet 40 depending on the length of the information to be asynchronously transmitted by wireless. Therefore, it is possible to carry out efficient asynchronous wireless transmission.
